The neutron is a subatomic particle, symbol n or n^0 , with no net electric charge and a mass slightly larger than that of a proton. Protons and neutrons constitute the nuclei of atoms. Since protons and neutrons behave similarly within the nucleus, and each has a mass of approximately one atomic mass unit, they are both referred to as nucleons. Their properties and interactions are described by ...

Helium-3 (^3He , see also helion) is a light, non-radioactive isotope of helium with two protons and one neutron (common helium having two protons and two neutrons). Its hypothetical existence was first proposed in 1934 by the Australian nuclear physicist Mark Oliphant while he was working at the University of Cambridge Cavendish Laboratory. Oliphant had performed experiments in which fast ...

To minimise the influence of detector and other experimental effects, LHCb physicists used a "double ratio" method: what they measure is R/K divided by another ratio, r/\hat{r} , the true value of which is known to be very close to 1 but which has similar sensitivity to detector effects to R/K . This gives an extra layer of protection: the scientists study and correct for all known experimental ...
