submerged in shallow waters of lakes, streams, rivers, reservoirs, ditches, and marshes. ID Keys: Leaves are smooth, alternate, and elliptical, 1/2" wide and 2 to 3" long. Leaf margins are wavy and have a prominent midrib. Importance: Inhibits water flow in drainage or irrigation ditches and canals; hybridizes with native species.

### **AQUATIC AREAS: Wetlands, Lakes, Streams, Rivers, Marshes**

Rivers, Lakes and Marshes The freshwater habitats of Teratopia are distinctly menacing, being home to some rather fearful creatures. Rivers flow down from the upland rainforest and form river deltas and marshes. The larger lakes are to be found generally where rivers have changed course and left larger depressions.

Siamese Crocodiles were found in oxbow lakes, rivers (wide slow flowing lowland rivers, narrow slow flowing mountain rivers), streams and marshes. As surveys were undertaken during the dry season, the water levels were at their lowest, and crocodiles were often found in the deepest parts of the remaining water bodies (locally referred to

The shores of lakes and wetlands, where the lake water meets the land, are great places for plant growth. The lush area lining the edge of a lake, slough or river is known as the riparian zone. Land and water constantly interact in a riparian zone, for example: Wind pushes the water up onto the shore and the warmth

Lakes and Ponds " Lakes, ponds, and wetlands can form naturally where the groundwater reaches the Earth's surface. " Beavers can also create ponds by damming up streams. " Humans " intentionally create artificial lakes by damming flowing rivers and streams to use them for power, irrigation,

water storage, and recreation.
