sensors for everyday life pdf

In the broadest definition, a sensor is a device, module, or subsystem whose purpose is to detect events or changes in its environment and send the information to other electronics, frequently a computer processor. A sensor is always used with other electronics. Sensors are used in everyday objects such as touch-sensitive elevator buttons (tactile sensor) and lamps which dim or brighten by ...

A tactile sensor is a device that measures information arising from physical interaction with its environment. Tactile sensors are generally modeled after the biological sense of cutaneous touch which is capable of detecting stimuli resulting from mechanical stimulation, temperature, and pain (although pain sensing is not common in artificial tactile sensors).

Rated 2 out of 5 by GLEN from 180 Degree Black Motion-Sensing Outdoor Security Light I bought this light to replace a very similar, excellent light on which the sensor plastic desolved after being in the sun for several years. While the old light was ideal, this one is made much cheaper and does not meet my needs. You need pliers to adjust the thumb nuts on the base of the lamps.
