Severe bleeding - St John Ambulance Australia

Bleeding, also known as a hemorrhage or haemorrhage, is blood escaping from the circulatory system from damaged blood vessels. Bleeding can occur internally, or externally either through a natural opening such as the mouth, nose, ear, urethra, vagina or anus, or through a wound in the skin. Hypovolemia is a massive decrease in blood volume, and death by excessive loss of blood is referred to ...

Bleeding - Wikipedia

Emergency bleeding control describes actions that control bleeding from a patient who has suffered a traumatic injury or who has a medical condition that has caused bleeding. Many bleeding control techniques are taught as part of first aid throughout the world, though some more advanced techniques such as tourniquets, are often taught as being reserved for use by health professionals, or as an ...

Emergency bleeding control - Wikipedia

Menorrhagia is menstrual bleeding that lasts more than 7 days. It can also be bleeding that is very heavy. How do you know if you have heavy bleeding? If you need to change your tampon or pad after less than 2 hours or you pass clots the size of a quarter or larger, that is heavy bleeding.

Serious Bleeding. Serious or life-threatening bleeding will be red and continuously flowing. It may be squirting. In terms of amount, serious bleeding might mean there's a half can of soda's worth of blood on the ground.

Stop the Bleed

Bleeding disorders may arise from problems with platelets, either from a low count in the blood or from dysfunctional platelets. A CBC, which includes a platelet count, may reveal a low number while platelet function tests may indicate that dysfunctional platelets are present. Several follow-up tests may be required to determine the cause.

Breakthrough bleeding or spotting occurs between periods or during pregnancy. Conditions such as fibroids and infections can cause it, and it is a common side effect of hormonal birth control and ...

Breakthrough bleeding: Causes, pregnancy, and the pill

Cancer and cancer treatments can lower the number of platelets in your blood. Platelets are cells that help your blood clot, so you stop bleeding. A normal platelet (PLT) count on a blood test is about 150,000 to 450,000. Normal clotting is still possible with a platelet count of 100,000. The risk ...
