Dynamic type checking is the process of verifying the type safety of a program at runtime. Implementations of dynamically type-checked languages generally associate each runtime object with a type tag (i.e., a reference to a type) containing its type information. This runtime type information (RTTI) can also be used to implement dynamic dispatch, late binding, downcasting, reflection, and ...

For more than a century, one of the most popular economic doctrines in the world has been the exploitation theory. According to this theory, capitalism is a system of virtual slavery, serving the narrow interests of a comparative handful of businessmen and capitalists, who, driven by insatiable greed and power lust, exist as parasites upon the labor of the masses.
