Multifactor Productivity--annual indexes for industries and major sectors of the economy that relate output to labor, capital, and--in some cases--other inputs; Productivity Research and Program Development works on strengthening and improving Bureau productivity measures and on understanding the sources and effects of productivity and technical change.

Labor Productivity and Costs Home Page (LPC)

Multifactor productivity (MFP), also known as total factor productivity (TFP), is a measure of economic performance that compares the amount of goods and services produced (output) to the amount of combined inputs used to produce those goods and services.

Multifactor Productivity Home Page (MFP)

In economics, total-factor productivity (TFP), also called multi-factor productivity, is the portion of output not explained by traditionally measured inputs of labour and capital used in production. TFP is calculated by dividing output by the weighted average of labour and capital input, with the standard weighting of 0.7 for labour and 0.3 for capital.

Job sharing or work sharing is an employment arrangement where typically two people are retained on a part-time or reduced-time basis to perform a job normally fulfilled by one person working full-time. Since all positions are shared thus leads to a net reduction in per-employee income. The people sharing the job work as a team to complete the job task and are equally responsible for the job ...
