Glaucoma is a disease that happens when fluid builds up inside your eye. Over time, the pressure from this fluid can harm your optic nerve. If this happens, you could lose your vision. Glaucoma can damage your vision so gradually you may not notice any loss of vision until the disease is at an advanced stage. UNDERSTANDING GLAUCOMA

UNDERSTANDING GLAUCOMA - The Big Know

Understanding Glaucoma What is glaucoma? Glaucoma is the name for a group of eye conditions in which the optic nerve is damaged at the point at which it leaves the eye. As the diagram below shows, this nerve carries information from the light sensitive layer in your eye, the retina, to the brain where it is received as a picture.
